

LEADERSHIP TRAININGS

Are your patrons confused, alarmed, or skeptical of **emerging technologies**, like artificial intelligence? Can they tell the difference between **what's real and what's fake online**? Do you find yourself fielding more questions that deal with **misinformation, data privacy**, or other **technology concerns**, and need support to respond? Library Freedom Project offers intensive, one-off, and series trainings to turn **library workers into community leaders equipped to meet ongoing and emerging tech needs**.

TOPICS COVERING EMERGING TECH, PRIVACY, INTELLECTUAL FREEDOM, & ACCESS

Privacy, anti-surveillance, and cybersecurity

Helping patrons protect themselves from privacy and security violations, both online and out in the world. Understanding issues like digital fraud, advertising, malware, doxxing, street-level surveillance, and more.

Intellectual freedom, censorship, online speech, misinformation, and information access

Supporting our communities in getting the information they need in an environment rife with mis- and disinformation. Learning information literacy, how to spot scams, how to seek authoritative sources, and how to protect against censorship from various actors.

Breaking up with Big Tech

Interrogating the Big Tech platform landscape and the attention economy, providing small-tech or offline alternatives to reclaim our attention, resist algorithmic distortions, and reconnect with our communities.

Critical AI literacy (CAIL)

Examining the various ethical, social, environmental, labor, and health concerns that come with overhyped and aggressive AI adoption. Providing critical frameworks for community resistance.

Other emerging tech issues

We adapt our curriculum to meet the needs of librarians and patrons in a changing tech environment.

INTENSIVE, ONE-OFF, & SERIES TRAININGS

We offer a number of leadership opportunities to meet the needs of busy library professionals:

- Library Freedom Institute, our flagship intensive training, runs for 10–15 weeks online with an in-person weekend. Gain the skills to lead LFP workshops and become a node of critical tech expertise. Now offering LFI at beginner and intermediate/advanced levels.
- We also offer standalone trainings or short series for library systems or regional consortia.
- Becoming an LFP member is another way to receive ongoing leadership training, support for LFP-related work, and a vibrant, collaborative community of practice.
- Our annual LFP Summit brings together our member librarians for skill development and community connection. We also organize regional gatherings for more in-person training opportunities.
